

Earthquakes

By: Lauren

Define your weather.

Earthquakes are sudden movement in the Earth's crust

Earthquakes can
cause a ton of
damage because
they can knock
you to the ground.

They can bend and crack
roads. Also they can make
bridges and buildings fall

Three interesting facts.

- Earthquakes can break buildings, crack roads and crack bridges.
- When earthquakes come you want to stay away from buildings ,mirrors and trees
- An earthquake can knock a person , building or bridge to the ground

How to prepare to stay safe

- You should make sure that most things outside are inside
- You can watch the weather to see when an earthquake is coming
