**Differentiation:** Some new features included that allow for different settings based on the learner's needs

**Reporting:** Ability to AirDrop now added to all newer iPads. Some increased share out functionality

**Ads and Inappropriate Content:** None

**Author:** Carl Hooker

### SUMMARY:

The latest iOS upgrade brings about some of the most significant changes to Apple's mobile operating system ever. Besides the update, Apple will now offer their main apps like Pages, Keynote and iMovie, but there are some better access to different tools in the iOS.

While many of these features are intended for personal use, there are updates that will help in the classroom and at home for students. Those new items are highlighted on this snap shot.

## Across The Classroom

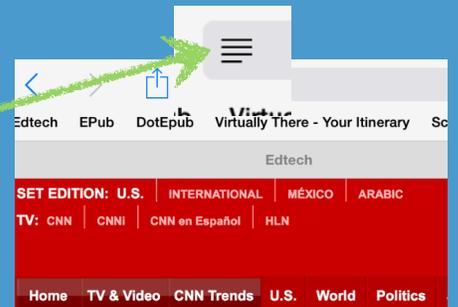

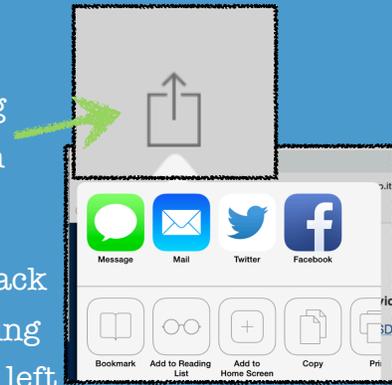

**Reminders:** The "top swipe-down" reminder screen got a much needed overhaul. You now have the top fields of choosing what displays like "Today" or "All". They even added a weather report in the Today feature.

**Search:** You no longer have to swipe all the way to the right to get the search bar. It's now available via a swipe-down gesture in the middle of the screen.

**Control Center:** Getting access to this used to require a double-click to bring up multitasking then a swipe to the right. Now it's a swipe-up from the bottom of the screen. Some items added here include a quick airplane mode button, sleep button, access to the camera and timer, and the usual access to airplay, brightness and sound.

# Changes in Safari

1. **Share Button Change** - This used to be the “jumping arrow” but now it’s been updated and combined with other features.
2. **Swipe to navigate** - You now have the ability to go back and forth in history on your webpage by either swiping from to the right from the left edge or swiping to the left from the right edge of the screen.
3. **Unified search and address bar** - The search and address bar have been combined into one “Smart Search” bar.
4. **Offline Reading** - If you are on a cluttered webpage and just want to see the content of an article, a little offline reading button appears after the full webpage loads. Click on it and you have an instant uncluttered page.
